

SAUMYA SINDHU

Full Stack Developer

+91-9810223773 | saumyasindhu75@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

New Delhi, India

Professional Summary

B.Tech student specializing in Industrial Internet of Things (IIOT) and MERN Stack Development. Experienced in building scalable full-stack applications, real-time systems, secure RESTful backend architectures, and AI-powered products using LLM orchestration and agentic AI workflows. Passionate about Generative AI, prompt engineering, backend engineering, and delivering production-grade solutions to real-world problems.

Education

University School of Automation and Robotics, GGSIPU

2024 – Present

B.Tech in Computer Science and Engineering (IIOT) — CGPA: 8.02

Technical Skills

Languages: JavaScript (ES6+), Java

Frontend: React.js, Redux Toolkit, HTML5, CSS3, SCSS

Backend: Node.js, Express.js, Socket.IO, REST APIs

Databases: MongoDB, PostgreSQL, Redis

ORMs/ODMs: Mongoose, Prisma ORM

Generative AI: LangChain, AI Agents, Tool Calling, Streaming Inference, Gemini API, Mistral API, Tavily

Tools: Git, GitHub, Postman, Vercel

Projects

VEXA – AI Chat Platform ([Repo Link](#))

React.js — Node.js — MongoDB — LangChain

- Engineered a production-ready GenAI chat platform featuring real-time AI streaming, persistent chat history, secure JWT-based authentication, and MongoDB-backed message storage.
- Integrated LangChain with Gemini, Mistral, and Tavily to enable agentic tool-calling, RAG-style web search, context-aware conversations, and automated chat title generation.
- Implemented Server-Sent Events (SSE) for token-by-token LLM streaming inference, reducing perceived user latency by ~40%, and optimized multi-session state management using Redux Toolkit.
- Implemented production-grade security layers including email verification, HTTP-only cookie management, route-level authorization, input sanitization, and AI-specific rate limiting.
- **Tech Stack:** React.js, Redux Toolkit, Node.js, Express.js, MongoDB, LangChain, JWT, Gemini, Mistral

DRIPKART – Full Stack Marketplace ([Repo Link](#))

React.js — Express.js — MongoDB

- Engineered a full-stack e-commerce marketplace supporting buyer shopping flows, seller dashboards, product listings, cart management, and role-based access control (RBAC).
- Implemented secure authentication using JWT cookie-based sessions, bcrypt password hashing, Google OAuth 2.0, and middleware-enforced route protection.
- Designed and developed scalable RESTful APIs for products, variants, inventory management, pricing, cart operations, and seller-scoped resources.
- Created dynamic variant management with stock tracking, variant images, custom attributes, and price overrides.
- **Tech Stack:** React.js, Redux Toolkit, Node.js, Express.js, MongoDB, JWT, Google OAuth

Achievements

- Smart India Hackathon (SIH) 2025 Pre-Finalist
- Developed a real-time full-stack web platform for wearable IoT health data visualization, alert management, and remote caregiver monitoring using MERN stack technologies.

Relevant Coursework

Data Structures and Algorithms (DSA), Object Oriented Programming (OOP), Computer Networks (CN)
