

SAUMYA SINDHU

Software Engineer — Full Stack & Backend

+91-9810223773 | saumyasindhu75@gmail.com | [LinkedIn](#) | [GitHub](#) | [LeetCode](#) | [Portfolio](#)

New Delhi, India

Professional Summary

Software Engineer and Full Stack Developer specializing in React.js, Node.js, Express.js, TypeScript, PostgreSQL, and MongoDB, with a strong foundation in data structures, algorithms, backend engineering, and API design. Experienced in building production-oriented AI systems involving retrieval, structured outputs, evaluation workflows, real-time streaming, authentication, and LLM-powered applications using LangChain and LLM APIs.

Experience

Backend AI Intern — FlyRank AI

July 2026 – Present

- Build server-side AI systems focused on retrieval, structured-output generation, and evaluation workflows for production-oriented applications.
- Design API contracts covering endpoints, request payload schemas, validation, status handling, and structured error responses.
- Implement retrieval and grounding techniques while working with evaluation workflows, authentication, retries, and reliability-focused backend practices.
- Work with unfamiliar backend and AI systems through independent investigation and iterative development, incorporating technical feedback to refine implementation.

Projects

VEXA – AI Chat Platform [Repo](#)

React.js — Node.js — MongoDB — LangChain

- Engineered a full-stack GenAI chat platform with real-time AI streaming, persistent chat history, secure JWT-based authentication, and MongoDB-backed message storage.
- Integrated LangChain with Gemini, Mistral, and Tavily to enable agentic tool-calling, RAG-style web search, context-aware conversations, and automated chat title generation.
- Implemented Server-Sent Events (SSE) for token-by-token LLM streaming inference, reducing perceived latency by ~40%, and optimized multi-session state with Redux Toolkit.
- Added security controls including email verification, HTTP-only cookie management, route-level authorization, input sanitization, and AI-specific rate limiting.

DRIPKART – Full Stack Marketplace [Repo](#)

React.js — Express.js — MongoDB

- Engineered a full-stack e-commerce marketplace supporting buyer shopping flows, seller dashboards, product listings, cart management, and role-based access control (RBAC).
- Implemented secure authentication using JWT cookie-based sessions, bcrypt password hashing, Google OAuth 2.0, and middleware-enforced route protection.
- Built MongoDB aggregation pipelines for product filtering, sorting, and seller-wise analytics, replacing inefficient client-side data processing.
- Integrated Razorpay payment gateway for secure checkout, handling payment verification and order status updates.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Java

Computer Science: Data Structures & Algorithms, OOP, DBMS, Computer Networks, Operating Systems, Software Engineering

Frontend: React.js, Next.js, Redux Toolkit, HTML5, CSS3, SCSS, Responsive Design, SSR

Backend: Node.js, Express.js, REST APIs, Socket.IO, Authentication, Authorization

Databases: MongoDB, PostgreSQL, Redis **ORMs/ODMs:** Prisma ORM, Mongoose

Generative AI: LangChain, AI Agents, Tool Calling, Streaming Inference, Gemini API, Mistral API, Tavily

Tools: Git, GitHub, Postman, Vercel, BullMQ

Education

University School of Automation and Robotics, GGSIPU

2024 – 2028

B.Tech in Computer Science and Engineering (IIOT)

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Computer Networks, Operating Systems, Software Engineering

Achievements

Smart India Hackathon (SIH): Achieved Top 25 Finalist status twice in the On-Campus Smart India Hackathon.

Industrial Ideathon 2025 – NSUT: Advanced to the Pre-Final Round.

Zero to One Hackathon 2025 – Chandigarh University: Reached the Finals.
